TECHNOLOGY

MOLDING **IN-MOLD** - progressive production technology of ski and snowboard helmets. The upper helmet body is molded directly on the polystyrene shell at high temperature with a special technology. That's why the helmet has lower weight and luxury look.

HARDSHELL **HARDSHELL** - injection molded ABS or polycarbonate outer shell, combined together with inner liner of polystyrene. Hard shell offers very good protection through the characteristics of the polycarbonate/ABS-material. With the hard shell technology it is possible to make very deep shells, offering a full cover protection.

VENTING SYSTEM - this system integrated in the helmet allows better airflow and reduces uncomfortable heat build-up in the helmet. Comfortable protection.

SOFT EARPADS - all offered helmets are produced with soft earpads. Your protection is not reduced.

REMOVABLE EARPADS - removable earpads can be detached when warm and sunny weather is.

RUN SYSTEM - fixing system which enables micro regulation of helmet size according to the head perimeter and ensures safety and comfortable position on the head. Suitably shaped control wheel makes easy to fix the helmet, especially for kids.

QFS (Quick Fit System) - fixing system which enables regulation of helmet size according to the head perimeter by very accurate anatomically shaped control wheel. QFS provide the perfect adjustment to match every individual head shape.

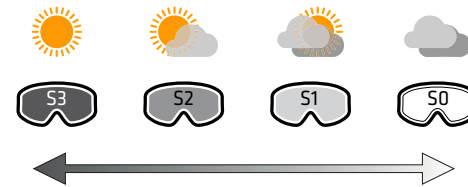

Mango and Etape ski and snowboard helmets meet requirements of European norm EN 1077. All Mango and Etape visors for helmets meet requirements of European norm EN 174.

REVO MIRROR - visors have a coloured mirror layer applied to the front of the lens, which significantly reduces glare and increases the filter performance of the visor by up to 60% in the case of intense light conditions - thus counteracting the unpleasant reflections of the sun's rays on the snow. REVO visors effectively increase the contrast of your view while blocking harmful UV rays.

FLEXVISION - thanks to this modern technology photochromatic visors automatically adapt tint level to the ambient light. With this technology you may ski in any weather condition.

how the FlexVision visor adapts to light conditions

ZEROFOG - thanks to ZEROFOG technology visors are protected against fogging. With Mango and Etape visors you will have always nice and real view.

EYEGLASSES - With ski helmets with visor Mango and Etape you can keep your eyeglasses to enjoy comfortably your ride.

HELMET DECORATION

FUNNY KIT

suitable for all types of helmets
easy mounting by Velcro
spare Velcro included (except 2214680)

SAFETY

In development and processing FOAMFLEX 3D™ material were taken into account all requirements for top protection including extreme skiing both on the slopes or in open terrain. The result is an original honeycomb geometric structure of FOAMFLEX 3D™, which perfectly absorbs even repeated sharp impacts. The patented material composition of FOAMFLEX 3D™ foam is a unique mix of polyurethane elements to ensure maximum safety.

COMFORT

Thanks to the use of modern innovative technologies, maximum protection has been achieved with almost 30% less weight compared to other back protectors. Lightweight and extremely effective ventilation increases wearing comfort.

VENTILATION

The honeycomb geometric structure with larger holes provides extremely effective ventilation and moisture management. This is important mostly during long term activities or higher temperatures.

BACK PROTECTOR - VEST

SPINE PRO 2.0

- EN 1621-2, level 1 approval
- patented shock absorbing FOAMFLEX 3D™ foam for 100% protection
- extended coccyx protection
- optimal ventilation and maximum comfort thanks to the combination of Lycra materials and elastic mesh
- anti-slip silicone at the waist
- adjustable elastic waistband with Velcro Safe™ = 100% abrasion protection
- the absorbent foam is possible to remove to wash the vest

sizes: M (150-165 cm)
L (160-180 cm)
XL (175-190 cm)
XXL (175-190 cm)

FABRIC TECHNOLOGY

softshell **SoftShell** The highly stretchable fabric, wind and water resistant with outstanding thermo-insulation features. Inner layer constitutes of functional membrane (water column 10 000 mm, breathability 10 000 g/m²/24 h). Outer layer is water repellent.

nanoloft **NanoLoft** is made from soft synthetic fabrics and that's why its exceptional thermo-insulation qualities remain unchanged even when the material becomes wet. Insulation layer use mostly air molecules so this material is also very light weighted and perfectly packable.

WindShell Windproof fabric made of polyamide fibers with water-repellent finish. Inside protective layer increases resistance to windy and rainy weather. The fabric is very light and therefore the garment is possible to pack into small pouch.

SuperDryntex Fabric made from functional polyester yarn. SuperDryntex is softer, more comfortable and with more natural touch than cotton or regular synthetic fibers. Very quickly transports moisture to the outside and thanks wicking effect keeps your body comfortable. Thanks to antibacterial treatment is very easy to take care of. Different fabric grammages of SuperDryntex offer various thermo-insulation features.

AirMesh High breathable fabric used for most exposed parts. Prevents unwanted overheat and offers great moisture management. Thanks to its elasticity provides perfect fit.

ThermoFit the highly stretchable fabric with excellent thermo-insulation features provides durability. The fabric has very good elasticity, smooth soft touch and antibacterial finish.

ThermoCore Highly insulating material that works on the principle of trapping air molecules between you and the outdoor environment. A better level of insulation compared to other materials is achieved thanks to specially treated microfibers, which are much finer and capture more air even in a smaller space.

Thinsulate 3M Fabric with excellent thermal insulation features. It contains a large number of microfibers which create together with the air a very effective thermal-insulating layer.

Velvet Soft synthetic thermal insulation material, which suits excellent as a 2nd layer. The material is very pleasant to the touch and provides high warmth. Thanks to the high hair, it also forms an insulating layer from the trapped air and thus prevents unwanted cooling of the body.

SmartTouch Thanks to SmartTouch technology, you will be able to interact your touchscreen (whether it is your MP3, camera, video camera, navigation or mobile phone).

Neo Proof Neo Proof is a functional material that retains heat perfectly, is waterproof and resistant to all weather conditions. Material is sufficiently elastic and very easy to wash.

Reflectiv This highly reflective material increases your safety due to higher visibility in bad weather condition or at night.

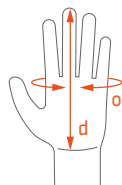

Stretch Seamless technology of Etape Stretch seat pad and its all-directions elasticity ensure maximum comfort during the bike ride. The seat pad shape and structure respect the anatomical differences of a woman body (Stretch woman) and man body (Stretch Man).
